

Team Name: Team Codex

Application Name: Travel By Bits

Description:

We have developed a system through which users can search and book train tickets using blockchain. AADHAR is required to book tickets. Food services are also included. If desired seats are not available, passengers can request to swap seats from other passengers. Extra charges are charged for requesting to swap seats and used as an incentive for agreeing to swap. Our system uses blockchain to keep a record of the booking and swapping of tickets, hence making it very transparent and secure.
